CARGO INSPECTION & BLENDING
Delivering Full-Service Blending Solutions

OVERVIEW
Professional inspection services are critical whenever the custody of goods transfers between buyers, sellers, and traders, especially for petroleum cargo. To assist with a seamless transition, Bureau Veritas has highly skilled professionals on the ground in all major transit and trading locations.

Strategically positioned across North America and South America, our local team of experts are able to partner with trading companies and refiners to provide quick turn-around of advanced product sampling, blending, and analysis—delivering trusted results that minimize costly disruption of business.

Our Latin America division is dedicated to conducting inspections and testing the quality of imported petroleum-based fuels in accordance with NOM-016-CRE-2016 / Latin America, a permanent standard which regulates fuel quality in Mexico.

WHY BUREAU VERITAS?
Bureau Veritas has extensive experience in blending petroleum products to meet client and international specifications, thereby adding significant value to your business. Gasoline and fuel blending require specialists with an intimate knowledge of petroleum chemistry, ship loading system, terminal tankage, pumps, and pipelines. Our team of experts know that blending is a balance of financial considerations versus specifications, and we test each component to ensure final quality on board.

With the support of our comprehensive network of independent testing facilities we are able to offer certificates that are trusted for their integrity by all contractual parties, including financial institutions and insurance companies.

BENEFITS OF INSPECTION AND TESTING SERVICES:
- Safety is an absolute and Bureau Veritas has a superior HSSE record
- Manage and oversee vessel, tank transfers, railcar, and pipeline operations
- Generate and review certificate of analysis for accuracy and conformance
- Submission of analysis to the Energy Regulatory Commission (CRE) for approval
- Submission of inspection reports to our clients for such field operations
- Client formalities for operations to be performed
- A local team of experts will provide 24/7 support
- A consistent and dedicated team you can trust for customer service delivery

SAMPLING WITH INTEGRITY

Bureau Veritas understands that the sample must be an accurate reflection of the product sampled. That’s why we act as a representative of our client to ensure the quality and integrity of the sample. Our team follows ASTM D4057 standards for sampling and service:

- All level
- Running average
- Spot sample
- Upper/middle/lower
- Top and bottom
- Pipeline
- Dead bottom
- Manifold

LABORATORY ANALYSIS

At Bureau Veritas, we know that precision and accuracy are critical in ensuring quality results. Employing both repeatability and reproducibility, our tests are reliable and can be trusted. Our team of experts run full-service ASTM analysis for gasoline, diesel and other components.

Bureau Veritas has a global network of state-of-the-art laboratories that are ISO 17025 accredited.
