WATER SAMPLING INSTRUCTIONS
FOR LEAD TESTING

1. Fill the first container immediately up to the thread of the bottle.
2. If required, immediately fill the next container.

For RDT and Residential Building
Turn on the faucet.

For 30MS, 30MS XL and Profile
After stagnation*, run cold water at a normal flow rate (4-6 L/min).
Leave the faucet on for 5 minutes, then turn it off. Wait for precisely 30 to 35 minutes and do not use the plumbing.

1. Fill the first container immediately up to the thread of the bottle.
2. If required, immediately fill the next container.

* Stagnation: to cease to run or flow water
